

GearEye

RFID FOR SECURE AND EFFICIENT SELF CHECKOUT

www.geareye.co

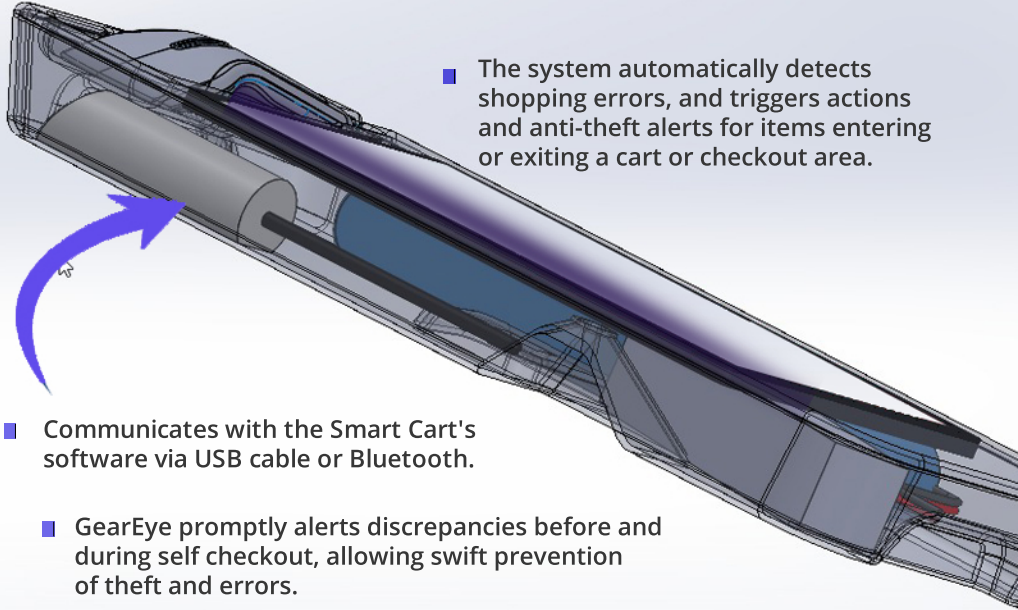

GearEye revolutionizes retail security and efficiency using advanced RFID technology and smart algorithms.

The smallest anti-theft RFID tracker for Retail

- GearEye scanner is seamlessly installed in a trolley, Smart Cart, or near checkout lanes, while RFID tags are attached to valuable items.

- The system automatically detects shopping errors, and triggers actions and anti-theft alerts for items entering or exiting a cart or checkout area.

- Communicates with the Smart Cart's software via USB cable or Bluetooth.
- GearEye promptly alerts discrepancies before and during self checkout, allowing swift prevention of theft and errors.

Track, check and locate merchandise items remotely in seconds in a 2-meter range

GearEye easily integrates RFID scanners within Smart Cart systems for remote management and tracking of merchandise items tagged with regular UHF RFID stickers.

Focuses solely on items in the trolley, ignoring nearby items

Ensures protected self checkout areas

Accuracy and efficiency in remote item detection

GearEye ensures a smoother shopping journey with alerts issued before the checkout
