

Making work instructions live

Interactive work instructions with Augmented Reality

ARJeannie provides engaging and interactive augmented reality work instructions. Our solution is far more effective than traditional videos or written documents.

ARJeannie is the tool we use to quickly and cost-effectively create this type of content. The tool:

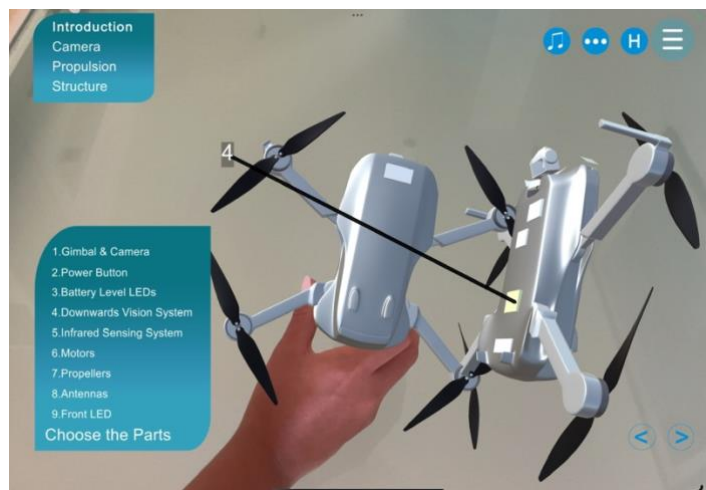

- Uses existing CAD models of products
- Is user-friendly, requiring no coding skills to create simplified animations

The result is a 3D interactive experience or augmented reality accessible on smartphones, tablets, and XR glasses.

We have created a brief video showcasing a [drone](#) demonstration.

We have worked with clients in the medical equipment and military industries, assisting them during various stages such as R&D, production, installation, maintenance, and user training. Our focus is on providing clear instructions to minimise human errors.

Interest in our services has grown with the introduction of XR glasses.

We would love the opportunity to showcase our work.

Nir Elperin 
Co-founder and CEO

Benefits

- Step-by-step instructions to lead users through their tasks.
- Overlaid processes on the device result in high understanding.
- Shorter time and better accuracy in the execution of tasks.
- Our rapid content creation allows quick content creation in product changes and recall events
