

# IoTen: Innovative Coffee Management.

**Running an Office Coffee Services or Coffee Shop Chain without real-time data means operating blind - issues arise undetected until too late. Generating loss of revenues, suboptimal operations and frustrated customers.**

## IMPROVES EVERY ASPECT OF COFFEE OPERATIONS

- Coffee quality
- Inventory management.
- Real Time online coffee sales
- Barista performance
- Service

**IoTen** provides you with actionable business insights by analyzing empirical data from your coffee machines, from all branch locations, from any existing type and any brand of coffee machine.

- ✓ **Machine ROI:** How well utilized is each coffee machine you placed at a retail location based on actual cups of coffee brewed.
- ✓ **Inventory:** Is the machine brewing more coffee than supplied by you? Or is there significant inventory shrinkage at this location?
- ✓ **Coffee Quality:** Is each of your baristas flushing the group head before every cup? Is your recipe for a "perfect cup" uniform across locations? Now, you can measure it objectively, by the numbers, while detecting gradual changes before they are noticed by human taste buds.
- ✓ **Reduce maintenance Cost:** Optimize machine maintenance schedules according to actual machine usage and water volumes. Significantly reduce technician costs with real time service data. Eliminate unnecessary service calls with remote access to coffee machine data.
- ✓ **Time of life:** Enhance machine durability and efficiency by notifying baristas of uneven group head use, water tube calcification, insufficient pressure, or low water temperature...

With data from millions of coffee cups brewed, our algorithms can uniquely identify operational issues so you can simply implement actionable insights to improve your bottom line.

The **IoTen** is plug and play and can be installed in every electric coffee machine transforming then into **an Intelligent System.**
