The faster you know the quicker you can protect  
Your co-workers, your business and your loved ones

Protect your  
business

Comply with  
regulations

Protect  
people

Secure  
privacy

## How can our solution help you fight the coronavirus?

- Break the chain of infection\* within minutes rather than days
- Quickly and effectively trace contacts and start quarantine
- Get 1<sup>st</sup> and 2<sup>nd</sup> degree exposure analytics within minutes
- Boost compliance with local and corporate regulations
- Identify indoor areas requiring closure or disinfection
- Receive density indications and alerts
- Communicate & educate

\* Shield for Business quickly breaks the chain of infection by accurately alerting members of the workplace community of exposure to confirmed Covid-19 patients who voluntarily reported themselves infected. Shield for Business is a game-changing tool that helps organizations break the chain of exposure through direct person-to-person proximity notifications and indirect person-to-location notifications.

## Deploy fast

The solution is delivered in a SaaS model and is hosted on multiple clouds as per territorial regulations. For large enterprises and governmental bodies, the solution can also be delivered on premises.

## Protect employees

The employee app works in the background and privately records all proximity and contact events on the employee personal device. The app also provides a reminder to fill out the health statement upon entering the facilities every morning. As an added value, Shield for Business allows adding location-based engagement features.

## Shield visitors

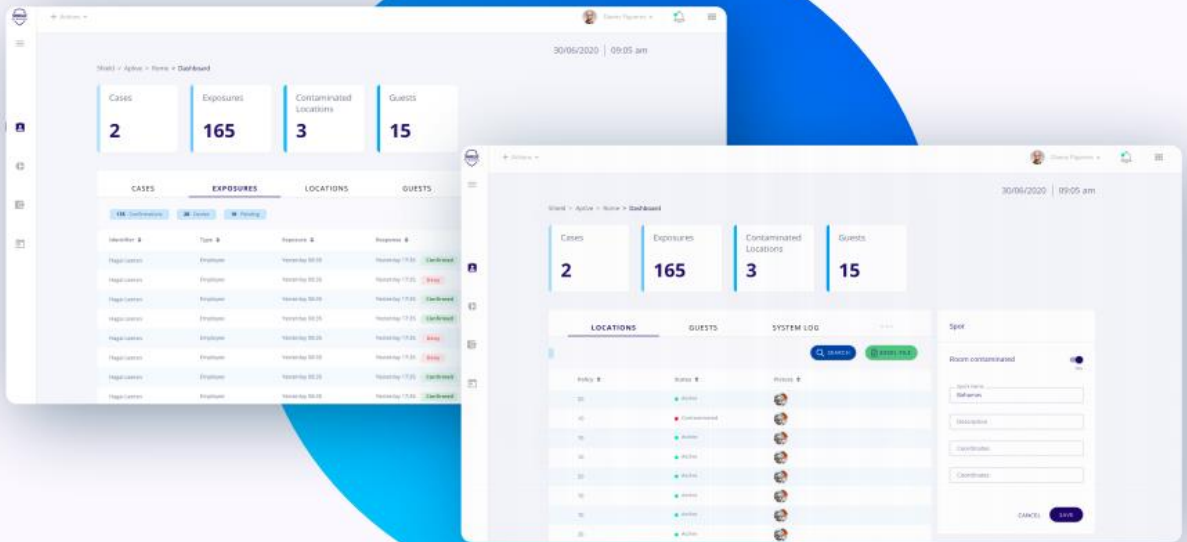

When entering the company facilities, visitors can check in using a QR code, NFC tag, or URL. Upon check-in, the visitor is required to comply with the organization's health policy. Companies may require visitors to check in in other spots within the facilities to document their "trail" for later proximity analytics.

# How it works

Once employees have tested positive for Covid-19, they may voluntarily share their timeline to assist the organization and its community in quickly breaking the chain of infection. The anonymous location timeline is compared with relevant employee and visitor timelines. If a potential exposure is identified and a user has been close enough to a confirmed case of Covid-19 for at least 15 minutes, the user is alerted. Employees who have been exposed to Covid-19 can confirm the alert or comment on it and receive instructions for self-quarantine. Additionally, the facility manager receives anonymous indications of micro-locations that might require disinfection.

# Discreetly Manage and Monitor

Provide health coordinators with an effective management dashboard for discreet monitoring and control

- Review cases and exposures within the organization
- Be alerted of contaminated locations in need of disinfection
- Receive online alerts of crowd density violations
- Get indications of employees or visitors who did not self-report
- Engage employees and boost app adoption
- Manage micro-locations or spots

A photograph at the top of the page shows two people in a factory or industrial setting. One person is wearing a white hard hat and a blue surgical mask, while the other is wearing a yellow hard hat and a blue surgical mask. They appear to be looking at something together.

## Shield for Business secures privacy

- GDPR Compliant
- The user location timeline is saved strictly on the personal device
- Users can opt-out with a single click
- The application is voluntary and anonymous by default, businesses can define their individual privacy policy
- The app can be configured to be active solely on the company premises and work-related locations

## Break the chain of infection quickly and discreetly

- The device proximity timeline is produced in the background
- Trace exposures within minutes rather than days
- Start quarantine within 30 minutes of case report
- Reduce privacy concerns and manual work

## About onspota

Onspota is an Israeli company with a mission to deliver a ground-breaking proximity application framework to help brick & mortar players engage and interact with their physical audiences, including customers, visitors, and employees.

We have utilized our experience and unique proximity framework to deliver Shield for Business - the world's leading business continuity solution for the Covid-19 struggle.
