

Automated Vehicle Inspections

Car companies, even the most efficient ones, are inherently slowed down by their dependence on human capital, and the only way to really ‘step on it’ is to automate the pickup and return process. Click-Ins’ unique technology performs automatic vehicle inspections with an unprecedented level of accuracy and consistency, so that rental, leasing, and carshare companies can be certain of every vehicle’s exact condition, every time it changes hands.

By standardizing the inspection process and introducing transparency into every transaction, car companies can know the exact condition of every vehicle throughout its lifecycle, maintain top vehicle quality at all times, recognize any damage as it happens, and streamline damage repair processes. This new standard of quality also minimizes loss, while improving user experience and communication with service providers, insurers, and other third parties.

How It Works

Simplicity

Submit photos of the vehicle through an intuitive mobile app, and we will perform an immediate inspection.

Speed

All photos are analyzed in near real-time, and a complete report is generated within seconds.

Accuracy & Consistency

Unique auto-inspection technology provides highly-accurate damage assessment and comparison.

The Efficiency of Automation

Streamline Transactions

Advance to an automated car pickup and return process and simplify inspection for employees, service managers, and users, by providing them with an intuitive mobile-guided image-capture tool that is fully integrated into their existing workflow and requires no training.

Minimize Loss

Get on-the-spot, accurate damage detection and analysis and be certain of the extent of the damage as well as the parties involved, to avoid losses due to undetected damages.

Standardize & Eliminate Friction

Improve user experience, reduce friction at touchpoints, and build customer loyalty by implementing a simple, efficient, and standardized pickup and return process that is completely transparent to the customer.

Monitor Carsharing Transactions

Gain a virtual presence at every carshare interaction by automatically inspecting the vehicle upon rental and return, for full transparency as to the exact condition of the vehicle, and optimal maintenance.

The Click-Ins Advantage

Simple Integration

Seamlessly integrate Click-Ins with front-end and business automation applications, using software APIs.

Lean Deployment

Implement Click-Ins' SaaS cloud solution into any work process and any scale of operation, with no reliance on additional hardware or proprietary applications.

End-to-end Solution

Effortlessly integrate with third-party solutions, such as FNOL, authentication and estimation platforms, telematics solutions and more, to expand service range, and facilitate new business models.

Immediate Operation

Quickly begin operating Click-Ins with no AI training period, as it has already been pretrained using proprietary data.

Top Image Quality

Generate premium data, using any mobile device, to ensure highly-accurate damage and risk assessments, by verifying image quality in near real-time and by receiving image capture instructions through an intuitive UI.

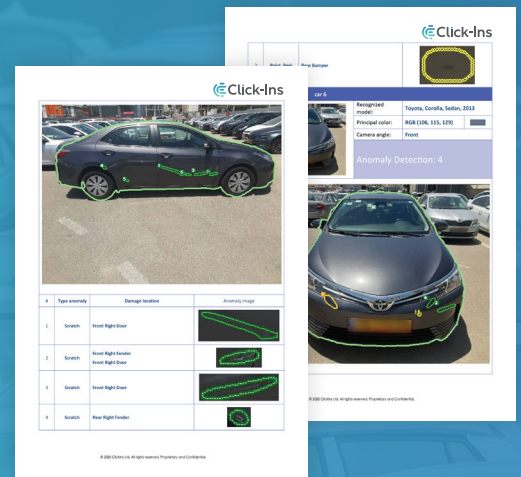

High Precision and Repeatability

Automate vehicle inspection process and detect fraud, by applying Click-Ins' hybrid AI technology and patented fingerprint approach, for accurate and consistent damage detection.

Unparalleled Flexibility

Instantly teach AI new trends, requirements, regulations, vehicle models, parts, colors, and more, using self-developed simulated data rather than millions of user photos.

About Click-Ins

Founded with the aim of simplifying vehicle inspection, Click-Ins introduces AI-driven automated technology that completely redefines its category. Helping insurance and car companies transition from manual procedures to fast and efficient, fact-based processes, Click-Ins provides a user experience that is both simpler and more reliable, for all parties involved.

To achieve the highest level of transparency and certainty, Click-Ins has developed a hybrid approach to AI. Using proprietary-simulated data to pretrain AI modules, and leveraging multidisciplinary technologies, Click-Ins' SaaS cloud solution accurately and consistently recognizes any damage, with no training period required.

With its highly-skilled team of technology, automotive, insurance and business experts, Click-Ins is headquartered in Israel, with offices and partners in the USA and Europe, providing 24/7 service to customers worldwide.
