

Introduction COZE.tech

Hello

We would like to introduce you to our new quality control services!

Coze is an innovative quality control platform that offers users with a whole new experience managing their products' quality in China.

Our system integrates **tailor-made quality inspection** questionnaires, a "ready to go" **network** of qualified quality technicians **all around china**.

We offer live statistical data uploads, that **automatically update** during the inspection, as well as live footage of the products as required, which The client can watch during the course of the inspection as it progresses.

We have some significant advantages in this market.

Our platform can be operated on a cellphone device which allows the inspector to feed the data directly into the summary report. This **saves** a significant amount of **time** compared to working on paper reports and enables us to inspect more products per day than any other QA company.

In addition to that, our AI based program is monitored by regional operations managers who supervise the technicians' work in the plants and make sure there's no room for biased results and time waste. Another great feature about our system is that each client gets a **personal database** that displays the results of all previous inspections.

This makes it easy to compare between inspections and locate the required data at any moment.

You can learn more about our operation at our website: www.coze.tech

We would love to offer our services to your business, as we are confident in their huge benefits.

For more information please contact us on info@coze.tech

HOW DO I START?

Apply

Fill in a form on COZE's website according to the product you need inspected and the required date of inspection.

www.coze.tech

01

02

Define

Our project manager will call you and define your inspection criteria and date of performance with you.

Launch

Your inspection form will be uploaded to your personal area on COZE's website and will wait for your approval.

03

04

Enjoy

Your inspection is performed in the factory, according to your definitions. You can sit and watch the progress of the inspection, including statistical analysis, in real-time.

**You get the product
you wanted.**

As simple as that.
