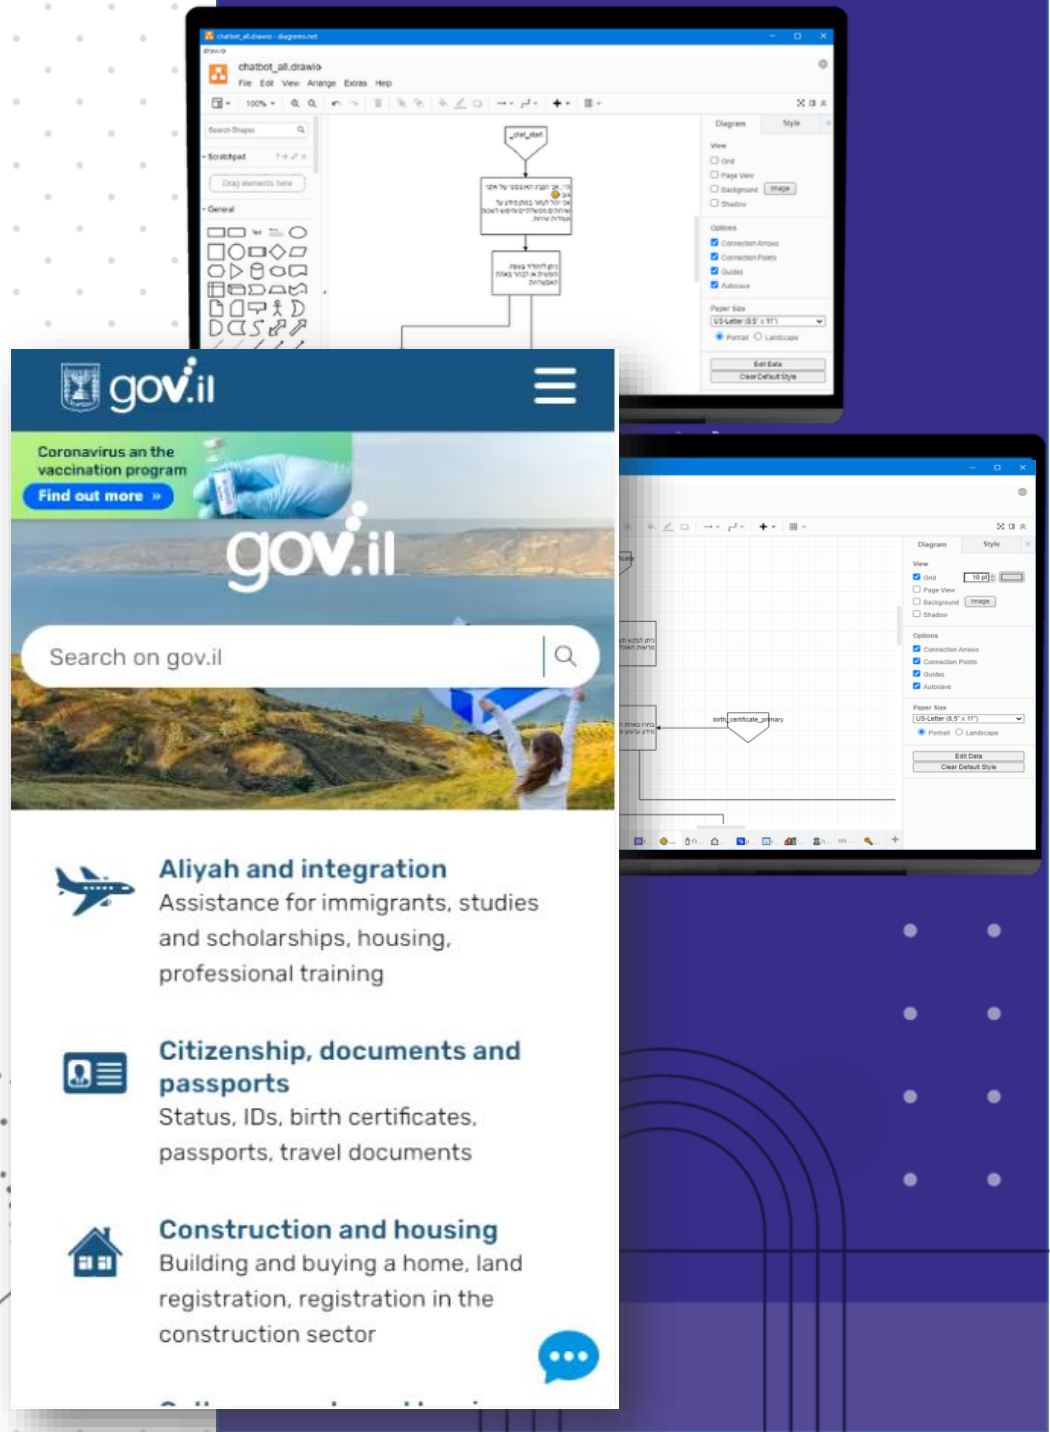
Create an app directly from your flowchart

Create a flowchart diagram on Draw.IO or Power point

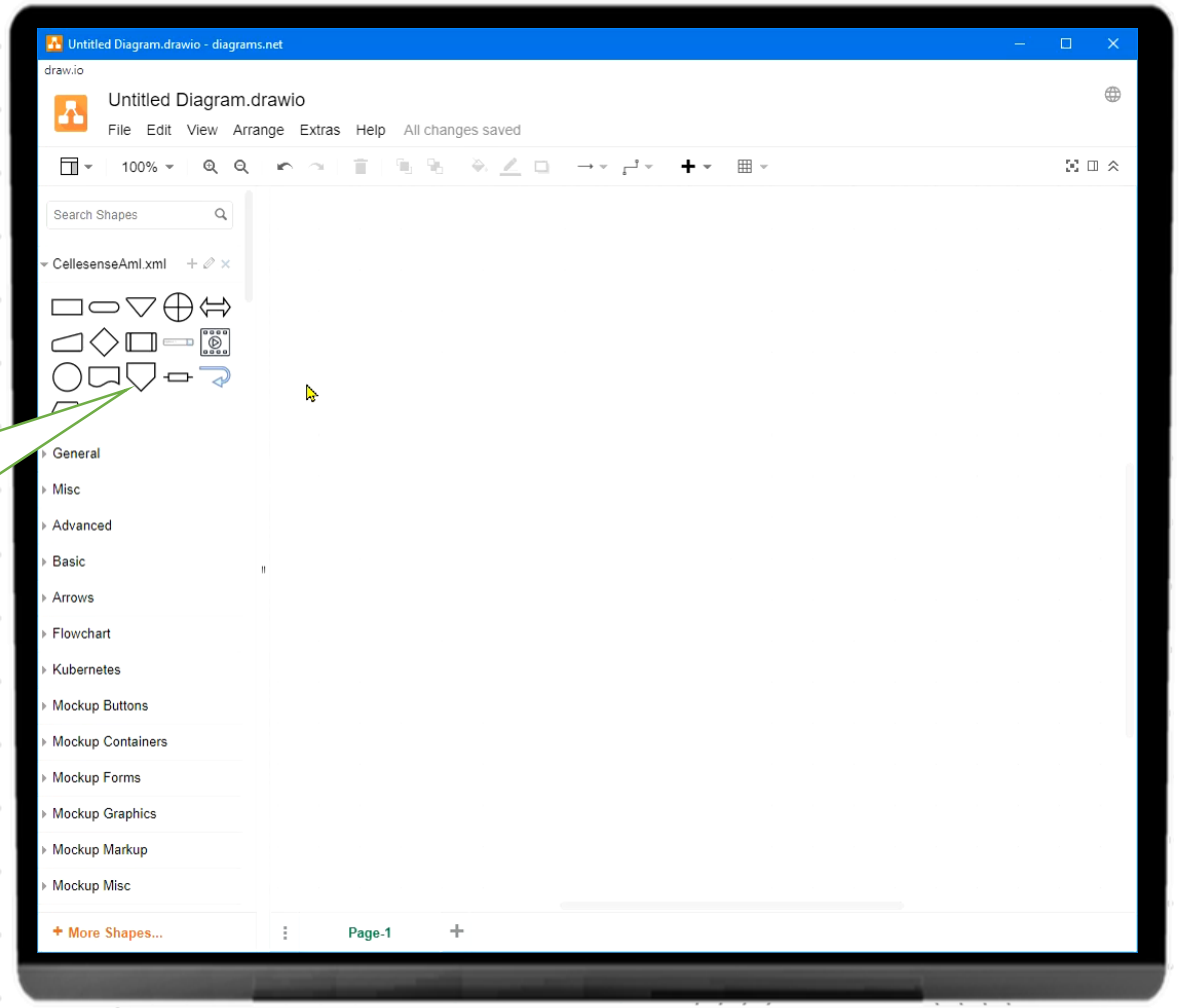
Upload the flowchart to the server

Get an application



How to build an applications using flowchart ?

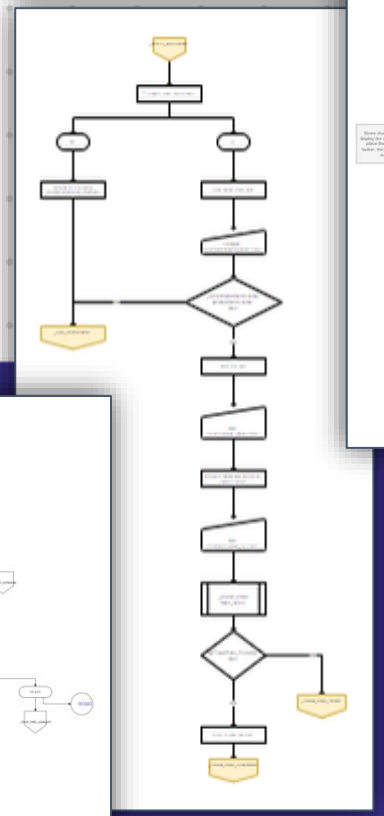
- Install a server in the cloud or on premise
- Optionally integrate Backoffice API
- Choose a drawing tool (Visio, Draw.IO…)
- Draw your diagram and include the content
- Upload the diagram to the server … and your done!

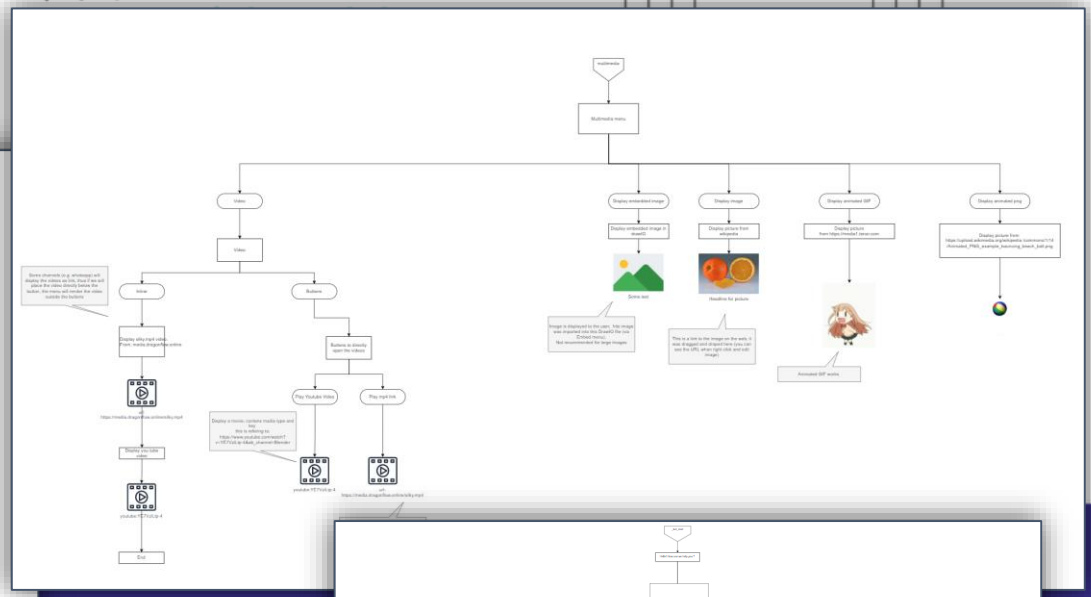


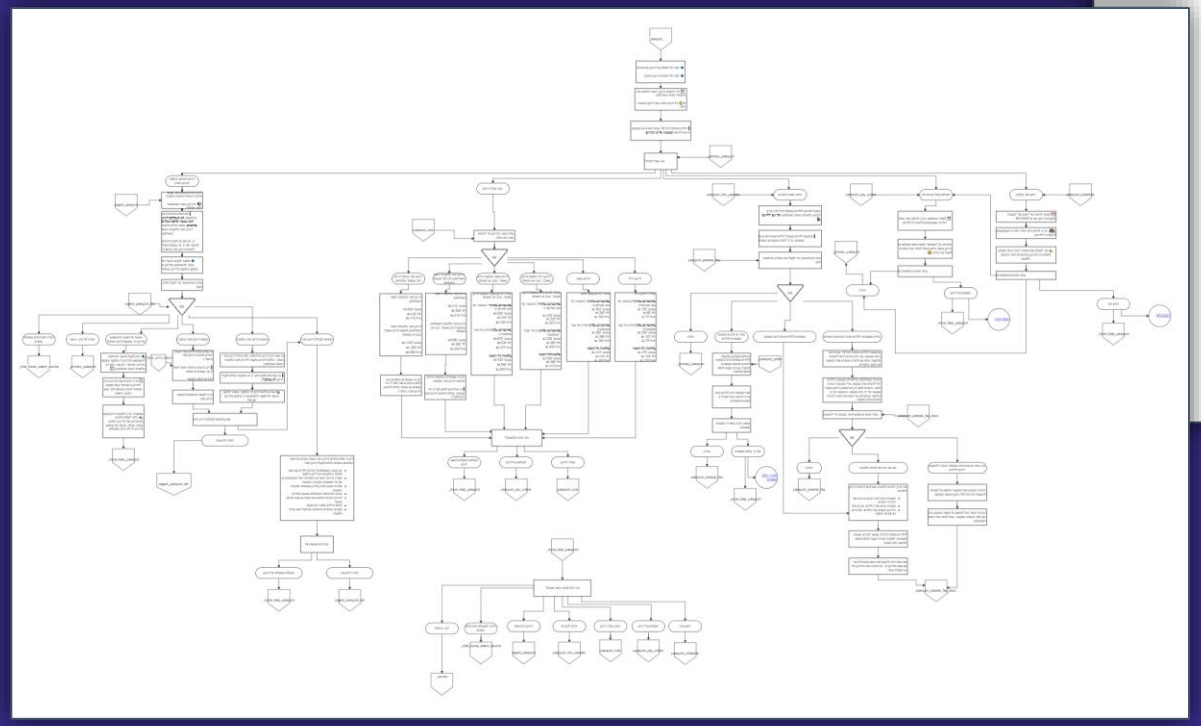
Draw Simple or Complex diagrams

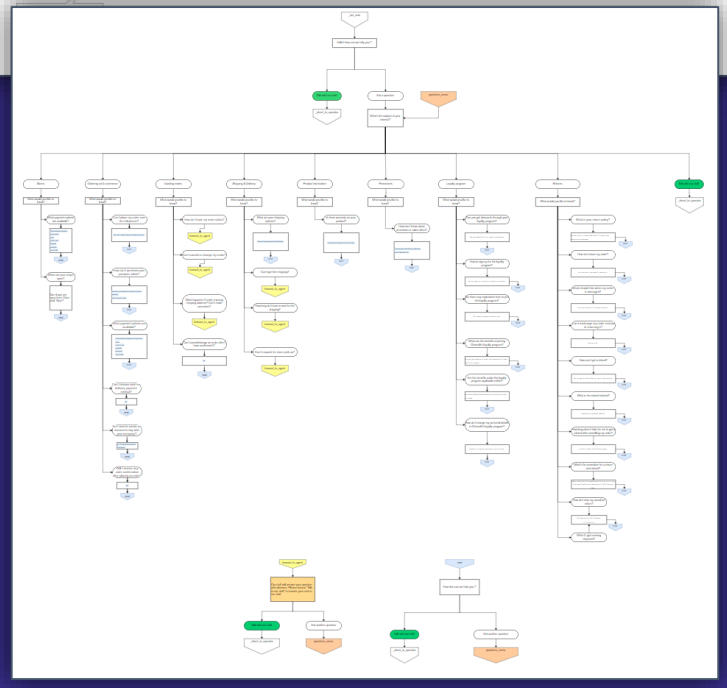
A single app can include dozens of charts

Charts contain:
output texts, multimedia, decisions, logic commands, calls to code, calls rest and soap services and much more









Advantages

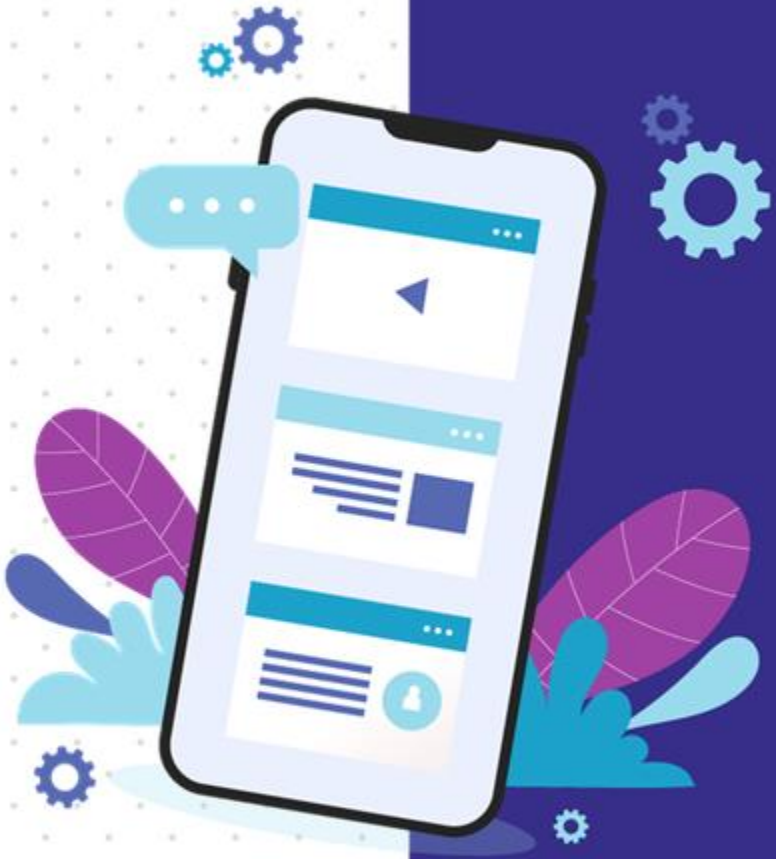
- Use off-the-shelf familiar software (e.g. Visio, DrawIO, power point)
- Update and editing, of the application is easy, by simply updating of the flow chart
- Full customization of UI & Logic flow
- Multilingual, Multi channel: WA, Telegram, FB Messenger, WEB/Mobile App &
- Real time validation of data using back-office data

Additional advantages

- Integration with search engine
- Integrate code & assemblies within DragOnFlow
- No need to change existing systems
- Auto-complete - based on semantic data
  AI for FAQ
- Security - installs on premise, does not use external services
  Each application runs in a separate process

Use cases

- Bots - Multi channel (Web, IM, Mobile app)
- Presentation layer for back-office transactions
  - E.g. login, execute queries, execute transactions, schedule tasks…
- Fill-in / create on line documents (forms)
- Operation manuals and troubleshooting
- CRM activities – open/close/manage processes …



Two Levels of DragOnFlow development

Content Manager

- Draw a flowchart, design and insert relevant content

IT expert

- Insert API / code if back office connectivity is needed, to the flowchart or directly on the server
