

MATICS

Real-time Operational Intelligence for Manufacturing

Join our vision

Matics created a unique real-time operational intelligent solution for agile management of the production floor.

Facilitating moving factories to new proactive real-time working environment, for significant enhancement in productivity, profitability and sustainability

Manufacturing production floor main challenges

Productivity

- Low Machine utilization
- Slow production rate
- High reject
- Machine Utilization

Sustainability

- Energy consumption
- Material consumption
- Material waste
- Material recycling

Profitability

- Machine and mold performance
- Employees cost

- Adapting real-time technologies so all stakeholders can see and solve problems when it is still matte

The Problem :

Even the best manufacturing plants are only at 45% of their theoretical output"

ABB CTO

The Solution :

Adapting real-time technologies so that they can see and solve problems in real-time

shorten the latency between event and corrective action

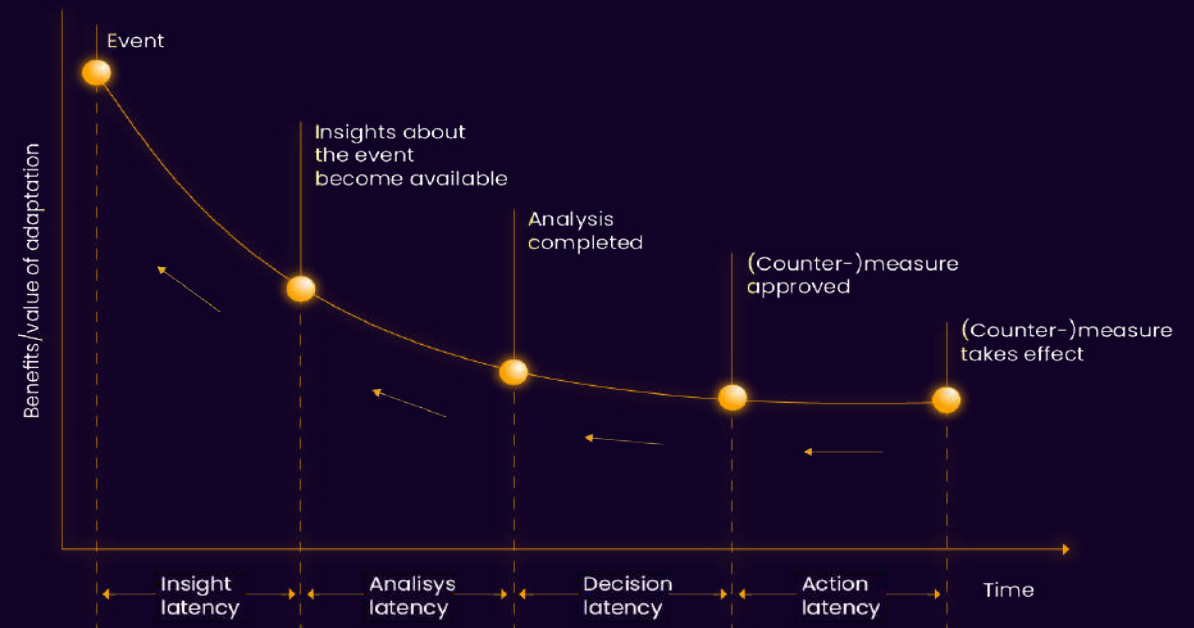

Figure 2: Corporate adaptation processes (source: based on Hackathon 2002; Muehlen/Shapiro 2010)

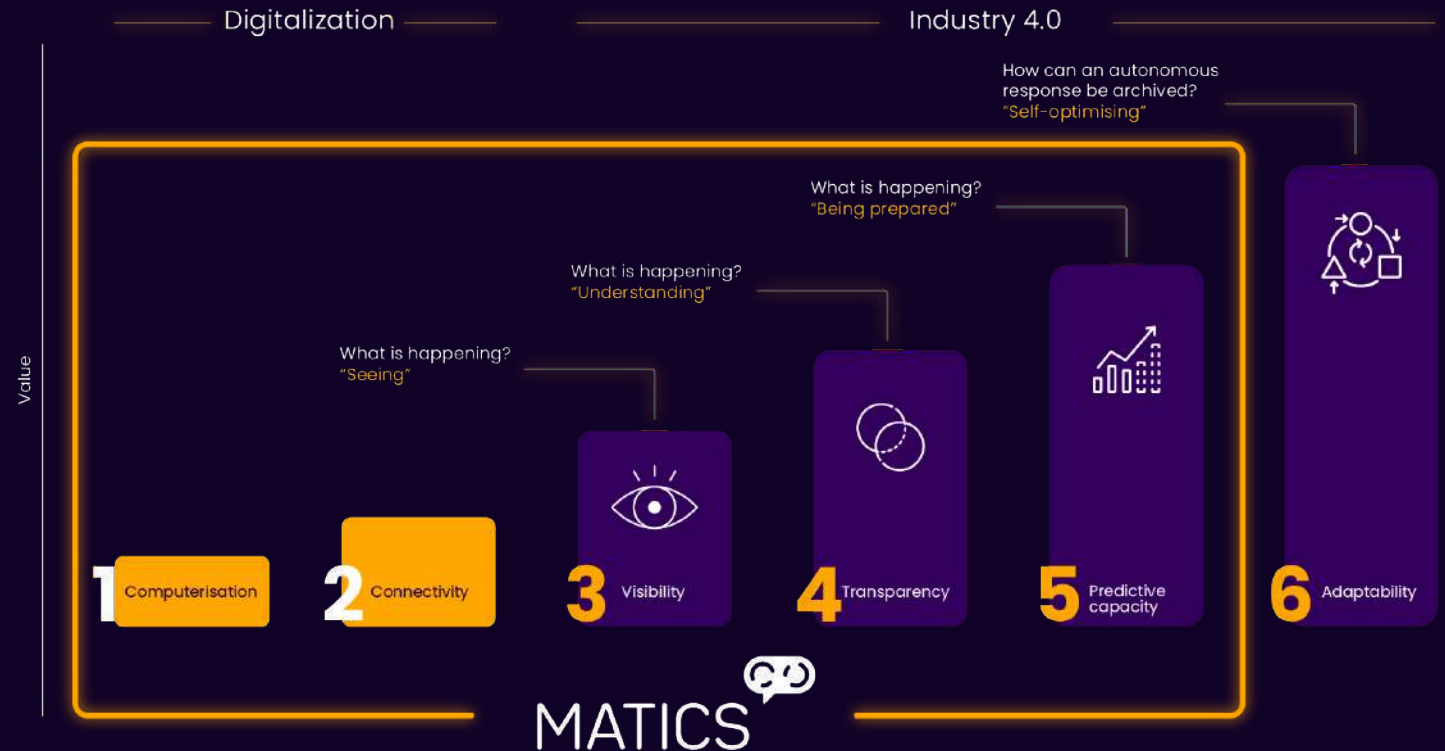

Matics' Leading RtOI system

From data acquisition and analytics to factory process automation

Leveraging new computing paradigms Matics created a unique real-time operational intelligent solution for agile management of the production floor

IoT technologies
Cloud computing
Analytics, Prediction
Work Management tools

Delivered on
Mobile, tablet and Web

The **goal of the Industry 4.0** transformation is to create a learning, agile company capable of continuously adapting to changing conditions -
Acatech STUDIE

With Fast Implementation

- Is implemented fast and remotely
- Comes at an affordable pricing (SaaS delivery with add-ons)
- Is a very scalable solutions
- Pervasive through all aspects of production floor
- Nonintrusive

Mission critical for leading factories around the world

The Matics real-time manufacturing analytics implementation was a plug & play. The key was to be consistent, to teach our people how to use the platform and to help them realize it was in their best interest to use it

Zohar Elimelech

Chief Information Officer, Tirat Zvi

Matics made it possible to collect data in real time, gain crucial predictive insights and reduce time-to-market per product by 25%

Ping Chen

Information System Manager, Tetra

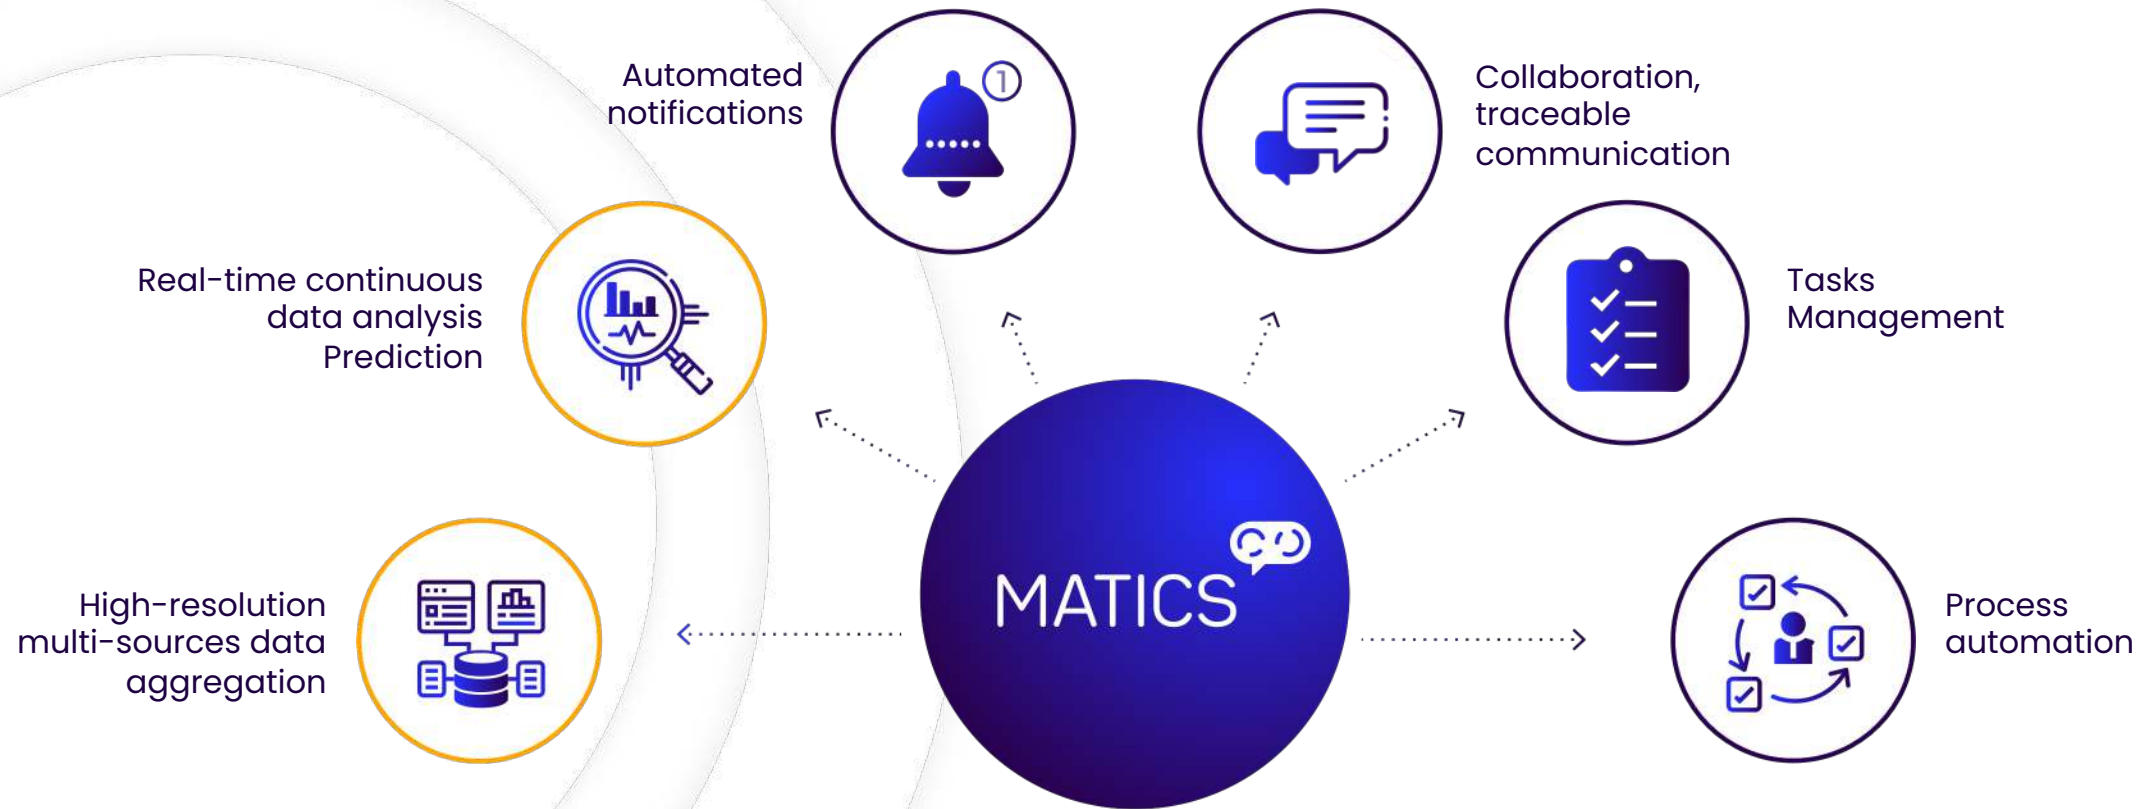

The Foundations of transformation

- ✓ Connectivity
- ✓ Visibility
- ✓ Continues Analysis and Insights
- ✓ Collaboration and communication
- ✓ Notifications and Information
- ✓ Procedures and Tasks
- ✓ Automation

Agility is enabled by continuously aggregating data to produce information, extracts knowledge and provide real-time insights to support and automate resolutions

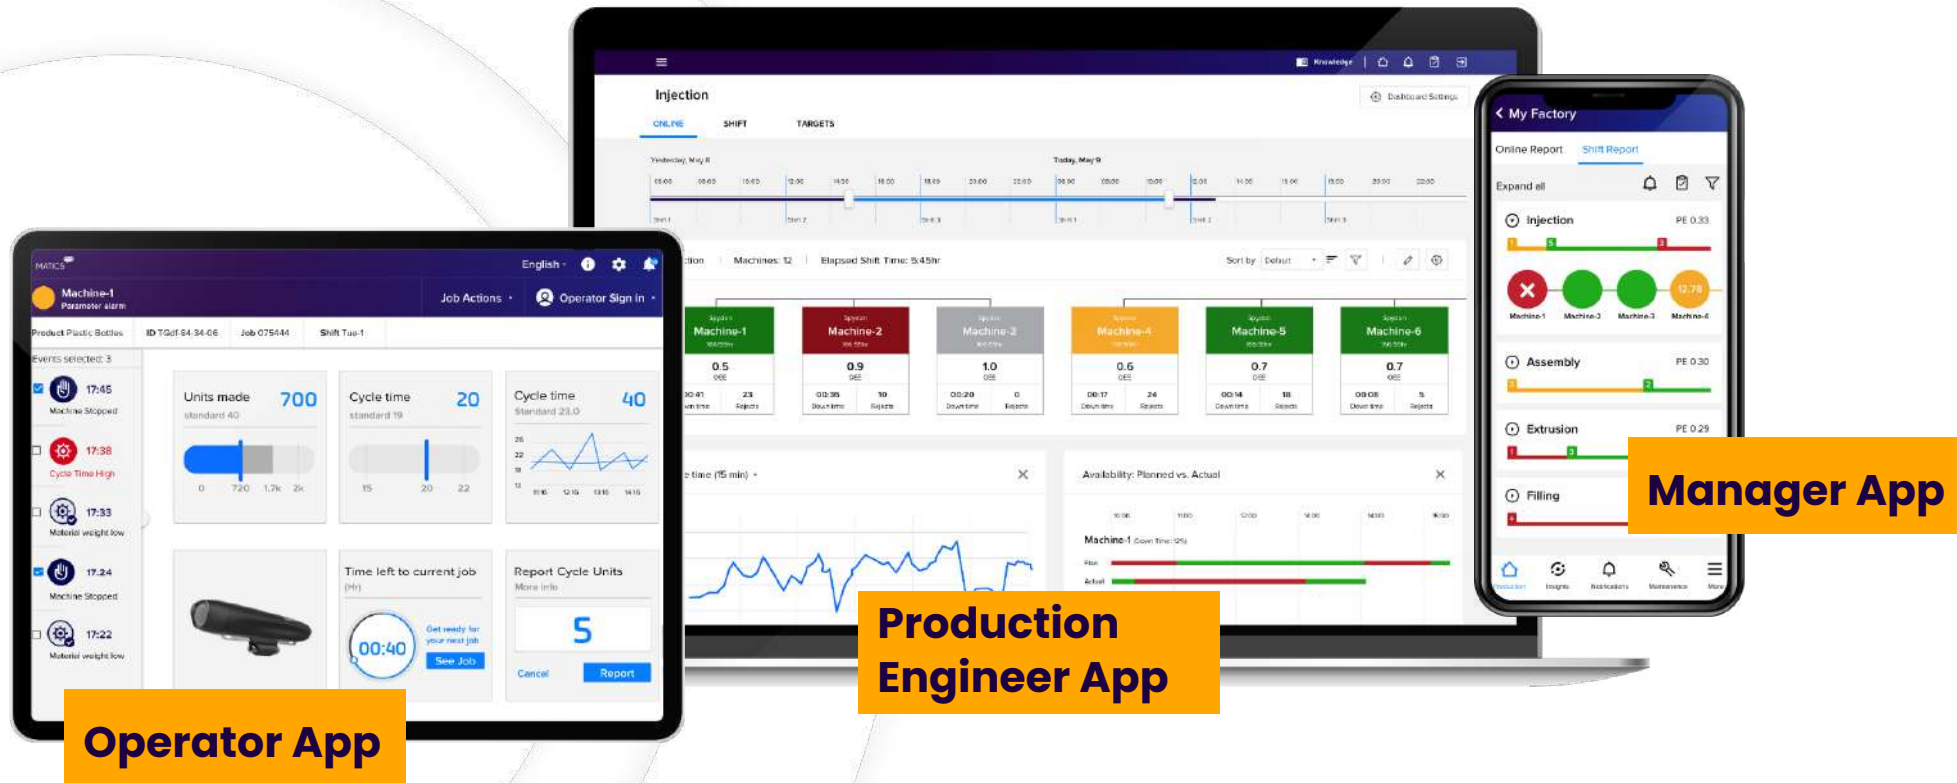

RTOI Combine Analytics with Work management tools

Transforming vast amounts of **operational data into actionable information**

User-tailored application for All Stakeholders

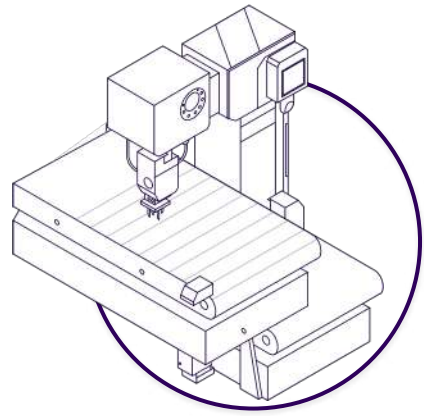

Smart connected application facilitates collaboration across groups.

With Matics work management tools, teams can act, collaborate, manage projects, centralize communication and reach new productivity peaks.

Multi Source Production-Floor Data-Aggregation Platform

a clear overall picture only emerges once different pieces of information are combined.

People – Production-Floor Data-Aggregation Platform

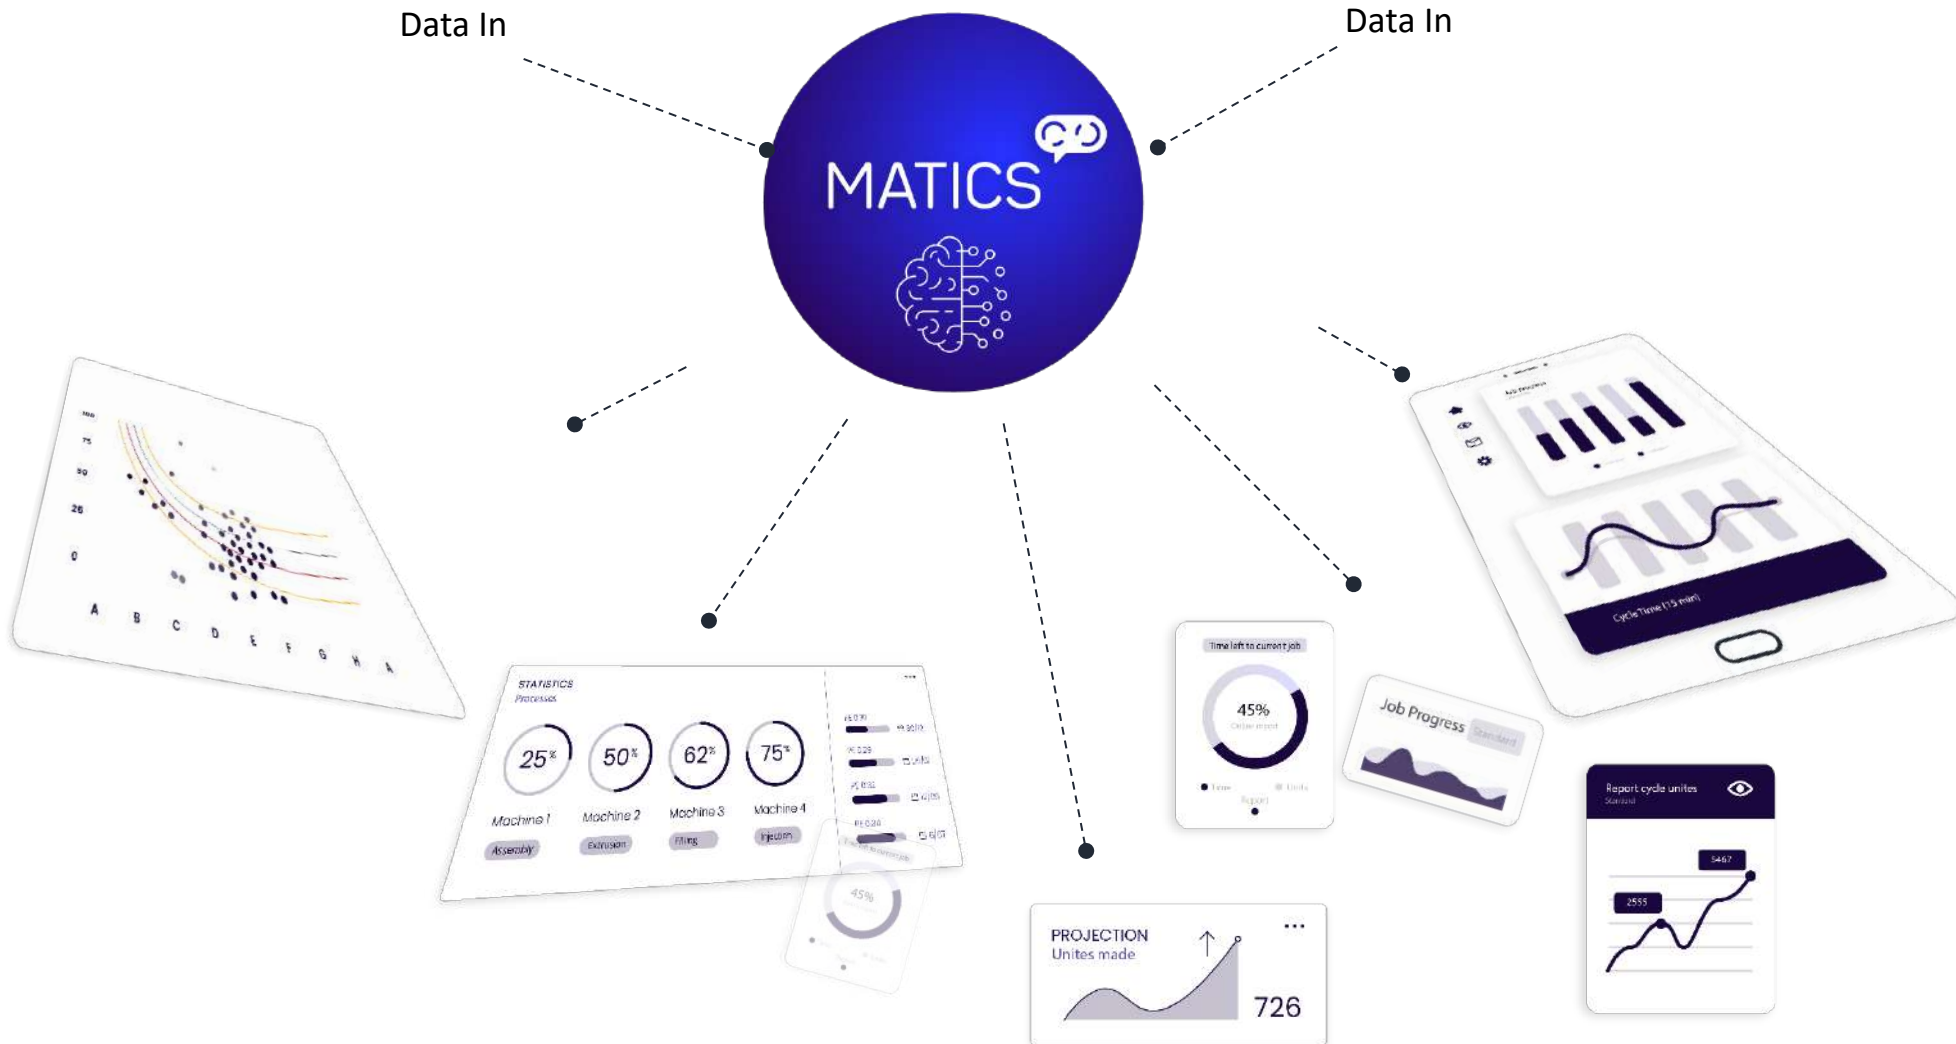

Integrating user-driven data from Matics smart applications

Real-time Deep analysis Engine

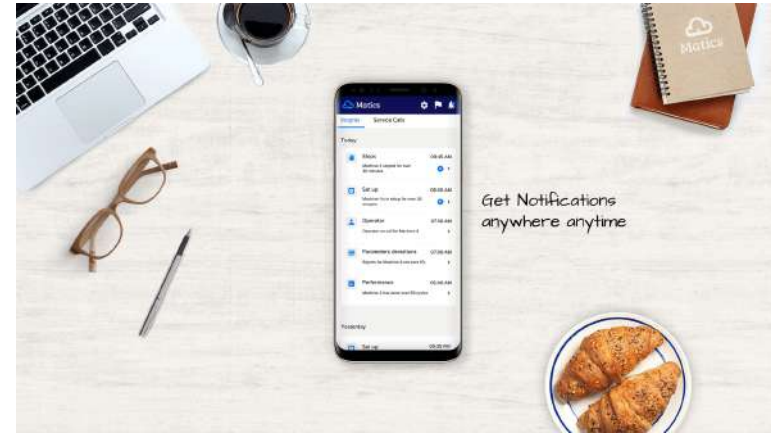

Extracts knowledge and provide real-time insights to support and automate resolutions

Structured communication

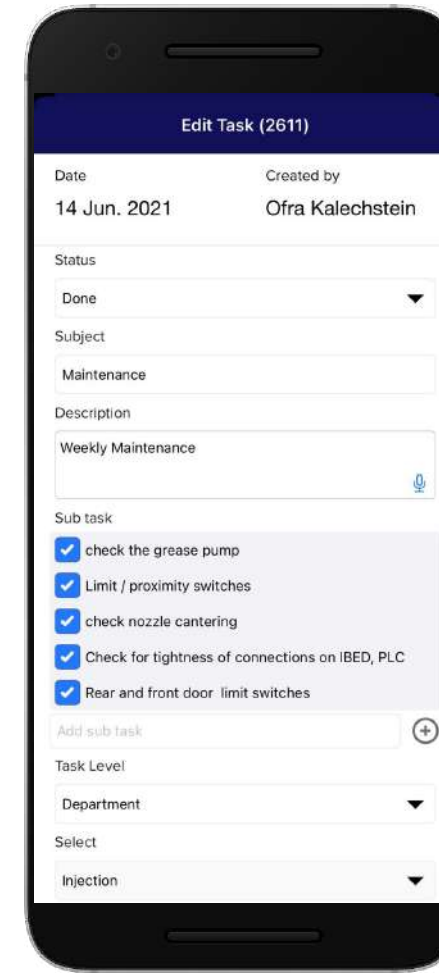

- ✓ Machine-based communication channel
- ✓ a non-hierarchical communication channel
- ✓ Traceable Communication between stockholders
- ✓ Every message is automatically tagged

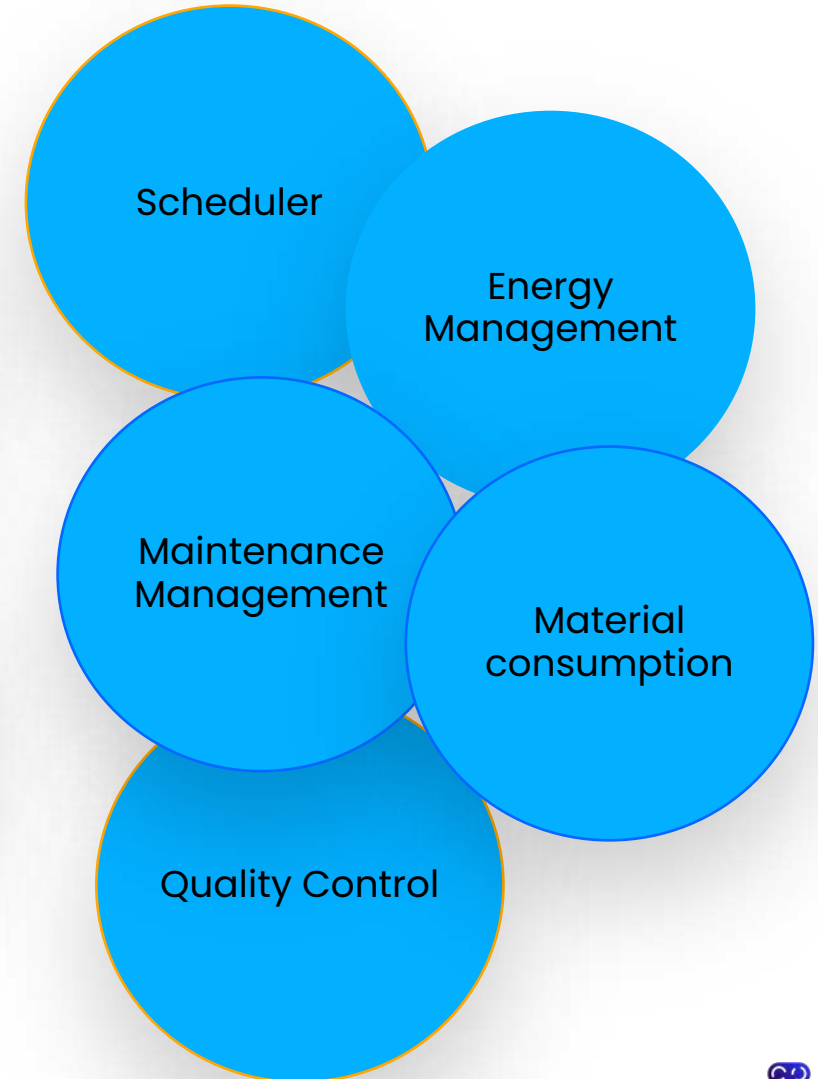

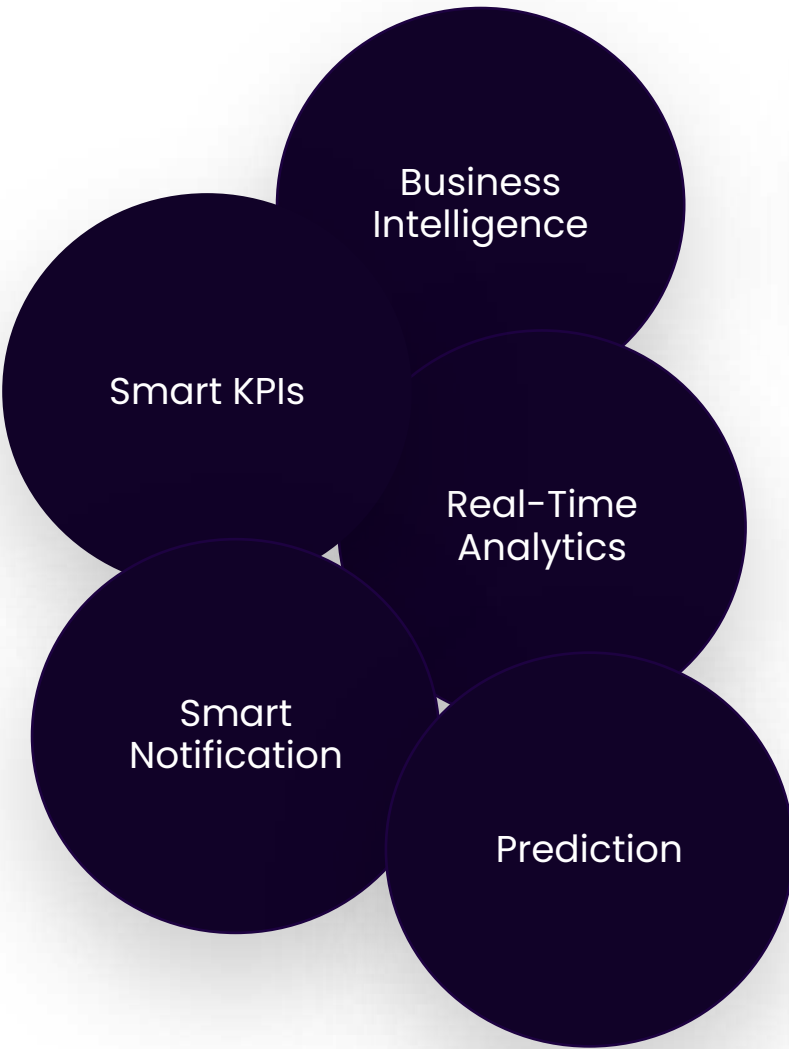

Transform production issue into actionable task

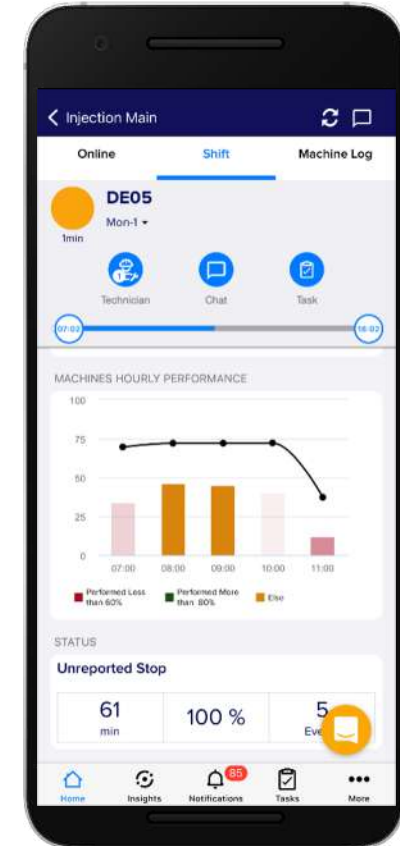

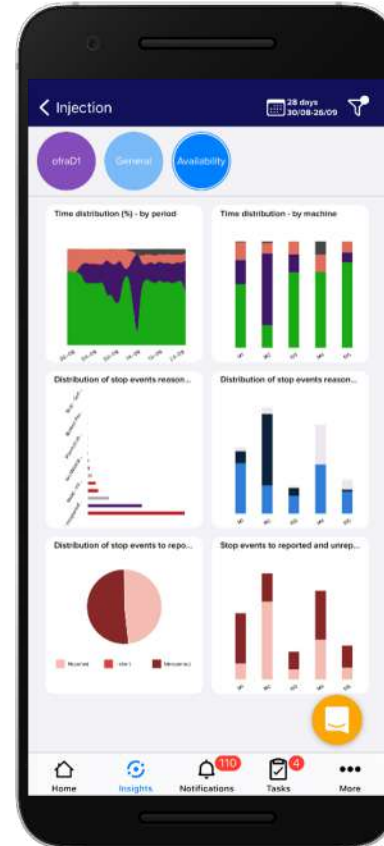

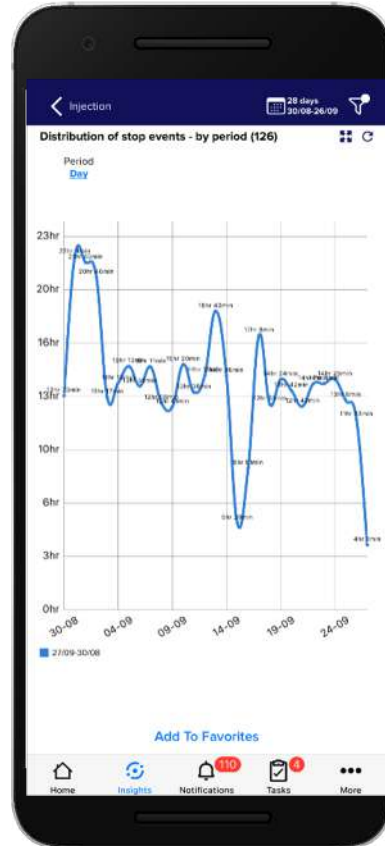

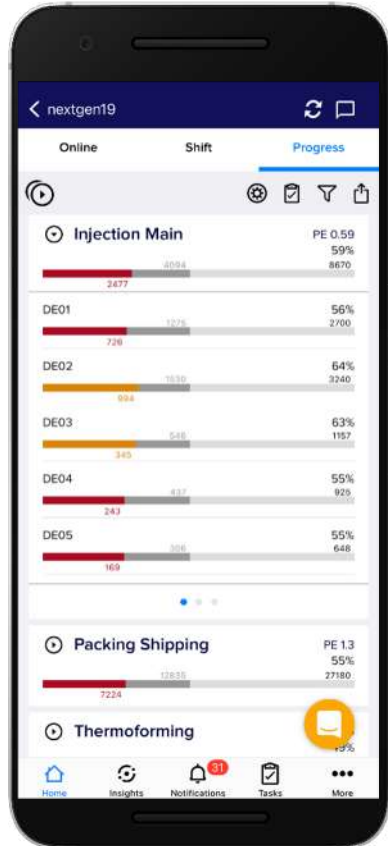

- ✓ Transform any issue to actionable tasks
- ✓ Track all tasks from beginning to end via shared Kanban
- ✓ Always see where your team stands against milestone
- ✓ Capture your knowledge with **routines**
- ✓ Automatic trigger routines based on pre-set production events

Analytics and Work Management Tools

Total visibility 24/7

from Any-where at Any-time

Manage your shift in real-time

Client testimonial: Arkal Automotive

Leading thermoplastic manufacturing supplier, serving the international automotive industry, such as BMW, VW, GM, Daimler AG.

These customers demand Just in time delivery to their assembly lines worldwide and had to open local mid-size facilities to be closer to its customers and stay relevant

Matics enables us to apply standard measurement to our production lines worldwide and react in real-time to critical production issues.

Staff has access to production data on-the-spot from anywhere in the world

CIO – Yehuda Bakal

The challenge: how to manage remotely distributed operations effectively from its Israeli based HQ

- Ensure flexible delivery and agile operation
- Deliver consistent product quality globally
- Ensure standard working routines and procedures worldwide
- Know and Solve problems in real-time
- Apply consistent KPI measurements across all sites
- Achieve higher productivity worldwide with 85% Goal

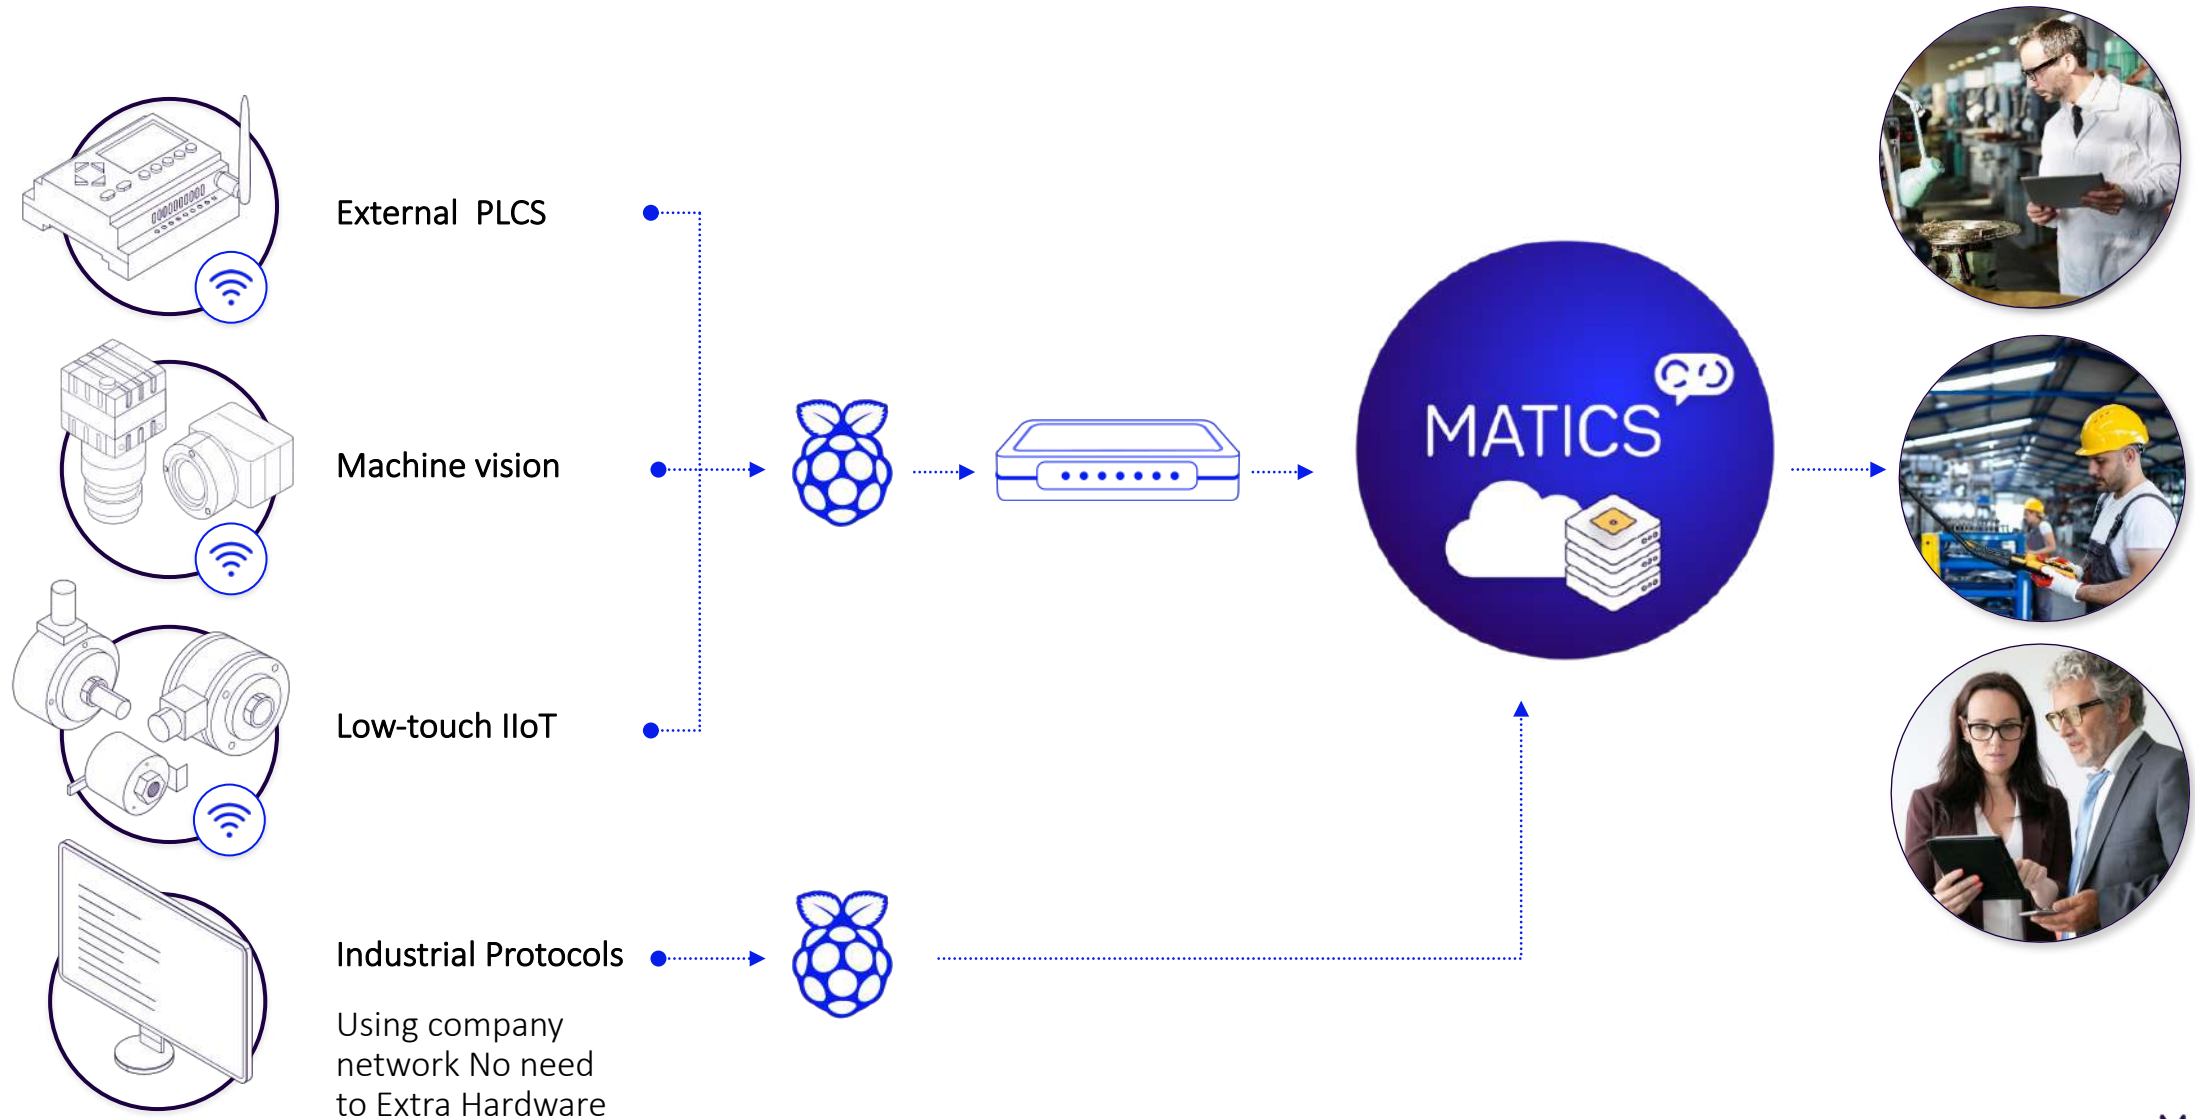

MATICS 

Results: Arkal became more agile and lean, adopting continuous and real-time management techniques, consistently and globally

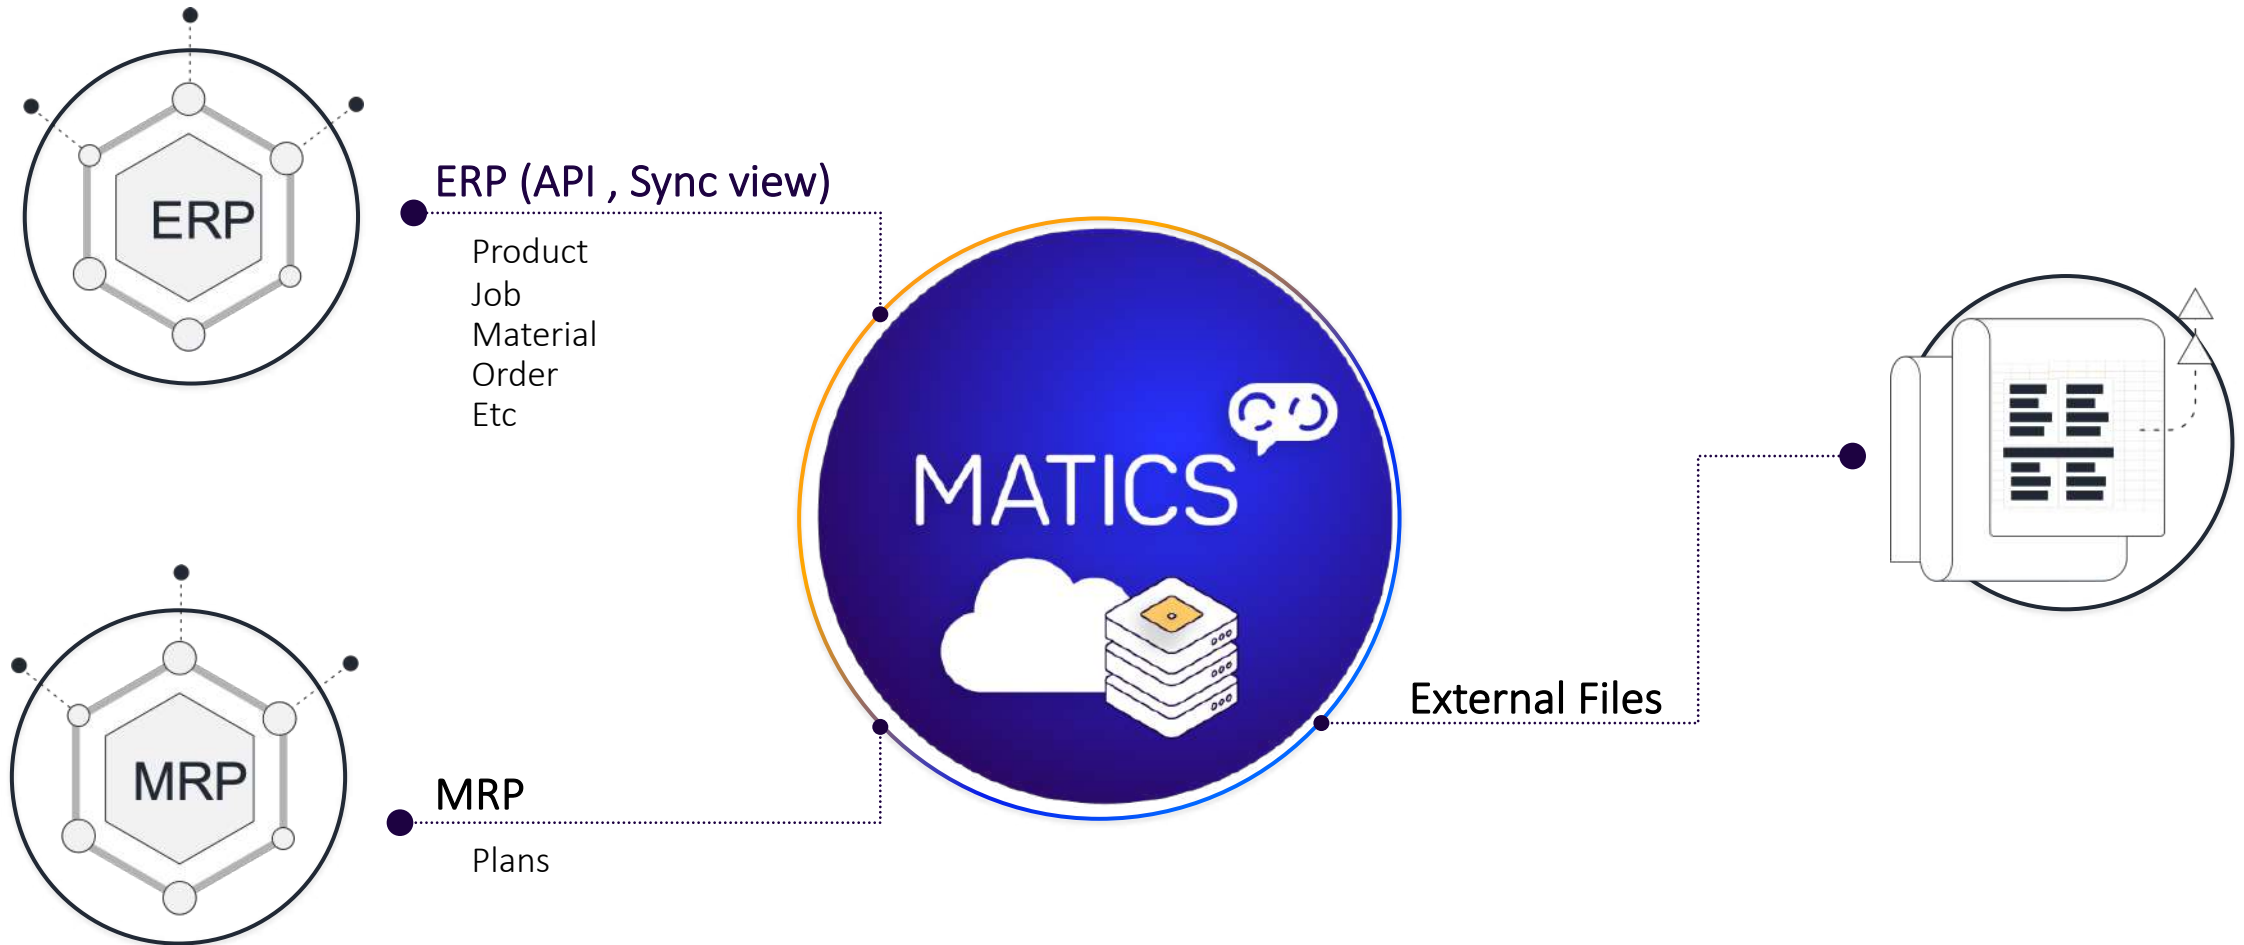

- Improved machine utilization in all sites, achieving 85% OEE goal
- Gained complete visibility over operations in 5 countries from a single interface
- Created a cultural shift, improved transparency and collaboration
- Enabled data-driven decisions at factory and HQ level
