

The following is an abstract of the findings of research conducted
during the years of development

- In 2009, we conducted an internal research study led by Dr. Edward Politkin, on the impact of using cosmetic products on the body's activity as regards **balancing the body's organs and internal systems**. The research demonstrated the efficacy of toiletry products encoded with frequency formulas, in supporting the balance and improvement of the function of the organs assessed. **Attached**.
- In 2012, we conducted research in collaboration with the neurobiological researcher, Nessia Laniado, regarding **the efficacy of the frequency in cosmetic products on facial skin**. The results of the study were very encouraging. They demonstrated a transformation in the activity of the dermis mechanisms and supported our claim with respect to the effective combination of cosmetic products with frequency formulas.
- In 2013, following two successful tests conducted internally, we conducted **clinical research at the University of Milan, Italy**. The research was led by Professor Spaggiari (a physician and a world-renowned expert in Quantum Theory) and Professor Bertie (Head of the Dermatology and Venereology Department). **In a blinded test** (frequency encoded and non-encoded identical products), the efficacy of cosmetic products with frequencies was proven to be far greater than that of identical products without frequencies. This efficacy was manifested by an abundance of moisture, antioxidants and collagen fibers, with a calming effect on the skin, strengthening its activity and vitality, for a glowing and smoother appearance. **Attached**.
- In 2016, we conducted an internal 3-month clinical trial of a **PMS Patch** with 45 female participants. Significant results demonstrating the efficacy of the patches were obtained here as well. **Attached**.
- In 2017, following the development of frequency patches, we performed an internal clinical trial on a patch to treat Attention Deficit Disorder - the **ADD/ADHD Patch** - with 18 participants, also lasting 3 months. The results of the trial were highly satisfactory. **Attached**.
- Presently, we are engaged in a unique documentation process on a global scale, managed by a Rabbi researcher from the town of Elad, Israel, in collaboration with a research institute in Russia, that demonstrates, via a **Kirlian Device**, the impact of the Modeany patches on the human body. Kirlian Photography is based on the electrical discharge of the physical energy into the air surrounding it. The unequivocal proof so far is that the irregularity observed with respect to electrical discharge **becomes balanced** following the use of the Modeany patches.

Modeany Ltd.

Add: No. 48 Haamal St., Raanana, Israel

It is important to note that:

1. **The adhesion points** that we recommend using, are based on the information and longstanding experience accumulated by Japanese and Chinese medicine, the acupuncture points already well known throughout the world.
2. Over the years, we have developed our **frequency technology (Energy Bio Care - EBC)**, which enables the use of frequencies matching those found naturally in the body to combine additionally with frequencies of vitamins, minerals and medicinal plants, whose ability to assist the activity of the body's organs and diverse systems has been proven in clinical research studies.
